PROFESSIONAL EXPERIENCE

Staff Software Engineer *Spotnana, Bangalore*

April 2026 - Present

Leading the AI Platform initiative for the organization, building a shared, AI-native platform that powers AI applications across the company - from conversational assistants to simpler request/response use cases - with a focus on the travel domain.

- Leading design, architecture, and ground-up implementation of the organization-wide AI platform, powering multiple AI application types (conversational and request/response) across travel-domain use cases.
- Building a simulation/evaluation framework to test AI applications before they go live - an ongoing, multi-milestone initiative.
- Adding knowledge base support for agents, and extending agents to use MCPs, internal function calls, and system tools.
- Building a security layer to proactively detect prompt injection attempts and mask PII before data is sent to the LLM.
- Prioritizing platform observability - improving early visibility into issues and proactively resolving them before impact.
- Mentoring 4-5 junior developers across multiple parallel feature tracks.
- Designing, reviewing, and implementing features end-to-end, from concept through production.

Technologies Used: LLM Platforms (OpenAI, Bedrock), MCP, Python, Java, Redis, Postgres, Distributed Systems

Senior Software Engineer *Atlassian, Bangalore (Remote)*

Dec 2022 - March 2026

Been part of multiple verticals, initially in Cloud Transition Org (focusing on Data Portability Teams) and then in the Ecosystem Organization, where I built a platform for 3P connectors to externalize the Teamwork Graph. My work has involved designing and architecting a unified platform to provide backup and restore capabilities of different Atlassian products, and contributing to migrating third-party data to Jira Cloud.

- Completely re-architected and implemented a scalable and distributed solution for Media transfer, enhancing backup and restore performance.
- Instrumental in externalizing the Teamwork graph via Forge Apps by building the core platform for 3rd party connectors.
- Designed and developed a new streaming solution for migrating third-party data to Jira Cloud.
- Created multiple services to enable backup and restore of Jira and Confluence products while managing downstream service workload.
- Led a group of 3-4 developers as a feature lead within the team.
- Designed multiple general-purpose libraries, including Load Levelling pattern and Rate Limiter.
- Created an automated workflow for data collection using Rovo AI. This helps in converting Jira tickets to pull requests with the changes to add data metrics as part of data collection with minimal intervention from Human.
- Actively mentored junior engineers and onboarded multiple engineers to the team.

Technologies Used: Kotlin, Java, NodeJS, PostgreSQL, DynamoDB, Redis, AWS

Senior Software Engineer *Compass Inc., Bangalore*

Mar 2022 - Dec 2022

As a collaborator in the Data Platforms Team, I was involved in onboarding new feeds to the platform and keeping the feed snapshot up to date in our platform. This was done using highly scalable and distributed architecture to pull listing data from various sources and then map it to further use it on our platform.

- Onboarded data from around 30 feeds to the platform.
- Created multiple subscribers to ingest the data coming in on a large scale.
- Involved in implementing concrete solutions to multiple production incidents that led to Sev2 issues resolution.
- Actively involved in design discussions on various aspects of distributed, scalable, generic and efficient architecture for pulling the listing data from various MLSes in the US.

Technologies Used: Java, Python, Bazel, PostgreSQL, MongoDB, Redis

Framework/Libraries Explored: gRPC, Apache Thrift

Senior Technology Lead *Tracxn Technology, Bangalore*

May 2018 - Mar 2022

Collaborated on multiple microservices responsible for functionalities like user management, authentication and authorisation, export generation and MIS.

- Led a team of 5 developers owning multiple micro-services. Took ownership of completely delivering and maintaining the feature end to end.
- Designed and developed a distributed and scalable framework for platform exports based on views.
- Created an URL based authorisation framework to control accesses for internal users.
- Designed various flows for user login that includes magic-links/openid and provided multiple flows for profile management through various channels.
- Actively involved in design discussions on various aspects of the user and resource management life cycle.
- Involved in fine tuning of the design and development of user/client Authorisation of all other services that needed common authorisation points.

Technologies Used: Java, Groovy, Node.js, JavaScript (ES6), MySQL, Redis, MongoDB

Framework/Libraries Explored: Spring Boot, ReactJS, OAuth 2.0, Apache POI

Senior Software Engineer *Progress Software, Hyderabad*

Oct 2015 - May 2018

Progress Developer Studio for OpenEdge (PDSOE) is an integrated ABL development environment that helps you to quickly build user-interface and business logic, incorporate and manage application data sources, run, debug, and deploy code.

- PDSOE is based on the eclipse plug-in-based framework.
- Developed multiple plugins for the ABL environment including refactoring.
- Fine tuned multiple existing plugins related to DB navigator, find references, visual designer etc.
- Involved in various performance enhancements to the product and owned the core model building and Abstract Syntax Tree (AST) generation of the product.

Technologies Used: Java, Eclipse Plugin development, ANTLR, Ant

Profiler Used: YourKit

Framework/Libraries Explored: OSGi, Eclipse RCP

Application Server Explored: Tomcat, PASOE

Software Engineer *Verizon Data Services India, Hyderabad*

Aug 2014 - Oct 2015

GWP E-Bonding API and CPSST - Customer Profile Self Service Tool

- Created SOAP and REST web services API that allows external customers to request quoting details, register themselves and leverage the platform independently.
- Developed and tested end to end flow for different products considering different scenarios.

Technologies Used: Java, JavaScript, Web Services, XSLT, SOAP, XML, REST

Application Server Explored: Oracle WebLogic Portal 10gR3 (10.3.6)

EDUCATION

Indian Institute of Information Technology, Allahabad

July 2012 - July 2014

- M. Tech - Information Technology, Majored in Software Engineering | CGPA: 9.55

Shri Ram Institute of Technology, Jabalpur

July 2008 - June 2012

- B.E. - Computer Science and Engineering (RGPV) | Percentage: 76.09
